"The New Navy" some thing advertised on TV, but what is the new NAVY. Is it stronger, more efficient, faster, safer for a ship's crew, or just a recruiting slogan? Well it may be all, because the new kid on the block is the Trimaran hull designs. These new ships the Blue Knight Patrol Boat, The Corvette, The Frigate, and The Leviathan in order from smallest to largest are the next plans for the Navy.

These ships will replace the old monohull designs. Some advantages are the wings can deflect tropics from the main hull saving countless lives alone. Another advantage is the wing also help prevent the ship from rolling over which for thoughts of you that saw the movie The Storm this advantage could be useful.

This is important because this will make higher safety, it is also faster speed at a top speed of 40 knots. Also the ships have top sea ratings of 5 which allows them to fight the enemy while they run to a safe harbor. So wars end faster with few casualties on our side. The less deaths we have the less chances we have to open the draft.

Also the smallest ship the Blue Knight will have electromagnetic weapons, what that does is it disables all the computers on the opposite ship. By disabling the weapons it stops the engines, guns, or anything else controlled by computers. What this does is it saves the lives it both forces it keeps them from firing on us, and when they aren't firing so don't return fire on them. So the people on there ship are taken capture only to be freed after the war
