# Fossil Water

Water that occurs in an **aquifer** or **zone of saturation** protected or isolated from the current **hydrologic cycle**. This water, because it is old, does not have the levels of **chemicals** or contaminants used in of our industrialized society, and its unblemished **nature** often makes it prized drinking water. In other cases, however, these aquifers are so isolated and the original condition of the water is so high in inorganic salts that scientists have suggested using them for waste disposal or containment areas.
