Occupational Safety and Health Administration

The Occupational Safety and Health Administration (OSHA) was established pursuant to the **Occupational Safety and Health Act** (1970). Within the Department of Labor, OSHA has the responsibility for occupational safety and health activities pursuant to the Act which covers virtually every employer in the country except all types of mines which are regulated separately under the Mine Safety and Health Act (1977). The Occupational Safety and Health Administration develops and promulgates standards, develops and issues regulations, conducts inspections to insure compliance, and issues citations and proposes penalties. In the case of a disagreement over the results of safety and health inspections performed by OSHA, employers have the right of appeal to the Occupational Safety and Health Review Commission, which works to ensure the timely and fair resolution of these cases.
